

## INSTRUCTIONS OF USE

1. Eliminate any pressure in the pipe. Clean the area to be repaired to improve adherence. Put on gloves.
2. Open the foil packet, take the bandage out and soak it in cold water for 10 seconds.
3. Apply the bandage firmly over the leak and wrap the bandage around the pipe to a distance of at least 2.5 cm. either side of the leak. The thickest part of the bandage should be applied over the leak to ensure greater resistance.
4. After applying the bandage, wet the gloves and dampen the bandage by rubbing it in the direction it was applied to provide a smooth finish. Wait 20 minutes until the bandage is completely dry and hard. The treated area can then be sanded, painted, etc.

### PIPES CARRYING DRINKING WATER

In this case, prior to applying the bandage, apply NSF rated putty. Product 101133-MASILLA REPARACION NSF (NSF RATE REPAIR PUTTY), which is ideal for this purpose, can be found in the INTEMAN, S.A. catalogue.

USE: After putting on gloves, cut a piece of putty and knead until an even colour is achieved. Apply the putty and cover the leak completely. Wait for the putty to set. Apply the bandage over the putty as indicated in the instructions.

**PRECAUTIONS:** Keep out of reach of children. Keep the bandage away from eyes and skin, it can cause irritation. In case of contact with eyes, wash with abundant water and seek medical advice.

**STORAGE:** Store in a cool, dry place. Expiry date: 3 years, indicated on the packet.
